

mesDM

The **mesDM** tool holds in one single solution all implantable Medical Devices that the patient has ever received. It provides an effective way to trace the existence and status of all devices.

mesMD acts as « a personal companion » and is an efficient communication tool between the patient and his surgeon. The open platform offers the same features and benefits for personalised care following non-surgical treatments, including protocols for rehabilitation and post-operative care.

A true social network for healthcare, this application enables:

#### BENEFITS FOR PATIENTS ☺

- Collect and hold data on all implanted **Medical Devices**
- Check progress of **reeducation** programmes (scores)
- Keep in touch** with key staff following the surgery
- Access **post-operative** advice and testing protocols
- Receive **alerts** in cases of market recalls & withdrawals

#### ☺ BENEFITS FOR HEALTHCARE PROFESSIONALS

- Provide patients with post-operative and lifestyle **recommendations**
- Follow-up **patient rehabilitation activities**
- Provide **device details** following revision cases
