

## scanDM

scanDM streamlines the Medical Devices traceability and associated costs

Through its proprietary integrated software solution, scanDM offers Providers staff the ability to scan and process **all types of barcodes, including 1D, 2D, standard and non-standard**. Central Pharmacies use it to acknowledge receipt of Medical Devices and OR staff use it for real time logs of products used and to document surgical cases, including in clinical trial settings. The HANDHELD mobile based scanDM is rapidly becoming the preferred tool and solution for everyday use. ScanDM can easily interface itself with other Provider main IT systems (through effective use of its standardised HL7 & Hprime connectors).

Designed by Medical Professionals, the scanDM benefits are :

### FOR PROVIDER PHARMACIES

- Reception of supplies
- Compliance with **ALL barcodes**
- Inventory** management
- Expiry date** management
- Traceability** of deliveries
- Electronic **order** fulfilment

### IN OPERATING ROOMS

- Secured** operating schedule
